"My Father in Heaven, help me never to forget Thy Love to me. It comes with the light of the morning, and it remains with the light of the stars of the night. TO INSURE YOUR SUCCESS

1—The Seeds We Sell Are All of the New Crop.

Grown by specialists in many parts of the world, **TESTED FOR GERMINATION AND PURITY.** Sure to grow and give you the finest results.

It takes no more time and effort to grow seeds from the best strains, so start with the best and save disappointment at flowering time by ordering direct from Park.

2—To Prevent Disease and "Damping Off".

Nearly all soils contain harmful fungi, which if not controlled, attack the seed and cause what is known as "Damping Off" (This usually happens just before or just after the baby plants emerge from the ground). Also there are present on the surface of most seeds certain pathogenic fungi which, if not destroyed, cause the seed to decay. (This is especially true in cold damp weather.) These often account for poor, uneven stands and weak, non-vigorous young plants. Fortunately, in recent years agricultural scientists have shown that certain chemicals will destroy the disease organisms and protect the seed from attack by organisms present in the soil.

AS A REGULAR PARK SERVICE

WE TREAT ALL VARIETIES OF 82 Species of FLOWER SEEDS. (This includes the greater part of those we offer) and **ALL VARIETIES OF VEGETABLE SEEDS** with the most efficient Seed Treatments as recommended by Experiment Stations. Better germination, stronger plants, higher yields will thus be yours with Park's Treated Seeds.

How Good Can a Sweet Pea Get?

We feel that the fine varieties offered below are the best Sweet Peas grown today. They are the result of years of painstaking selection on the part of William Zvolanek, veteran California Sweet Pea breeder. These three types of multi-flowering Sweet Peas have terrific vigor which manifests itself in an abundance of extra long (18-20") pencil stems, each carrying 5-6 even up to 8 flowers instead of the usual 3 or 4; and in marked heat resistance.

GIANT PANSIES

A PARK SPECIALTY

Pansies are well and favorably known, so that a description of their exquisite beauty, and usefulness in the garden is unnecessary. They are simply indispensable, and if we were to name a half dozen of our best seedling flowers, the Pansy would be one of them. There is, however, much difference in the strains, some being greatly superior in vigor and free-blooming quality to other plants as well as the great size, form, variety, and richness of colors and variations. We are pleased to say that the seeds we offer are from Pansy specialists, all of the new crop, and cannot be surpassed in quality, regardless of claim or prize.

SELECTING AND SOWING

If you wish seeds to sow in a garden bed or to present to children, or if you have had but little experience in raising flowers from seeds, select such flowers as Alyssum, Aster, Balsam, Cosmos, Calendula, Candytuft, Oriental Pinks, Gailardia, Helianthus, Marigold, Mignonette, Bedding Petunia, Pansy, Phlox, Ricinus, Scabiosa, Nasturtium, Valerian, Verbena and Zinnia; for vines get Coboea, Cypress, Dolichos, Gourds, Morning Glory, Thunbergia. Even in sowing these it is well to prepare the bed carefully in a sunny exposure; place a low board frame around it and after sowing, water and cover with a newspaper until plants appear. If you sow seeds in the open with full exposure to rain, wind and sun, you should not complain if few of the seeds become plants.

TO INSURE SUCCESS. Many failures with seeds are due to lack of knowledge of the time required by the seeds to germinate. Study the table on pages 45 and 46 to avoid failures from this cause. Follow instructions in the "Gardener's Handbook."

Fringed All Double

Petunia, All Double America

Thrill to the Lively Beauty of Fine PETUNIAS

The All Purpose Flower: For lovely beds, attractive borders, cutting, charming porch boxes, winter pot plants.
A Type and Color to please every taste: All Doubles, Giant ruffled singles, Plain edged giants, Small prolific singles. Pink, yellow, red, rose, purple, lavender, blue, white. Dwarf or tall, spreading or compact.
 Petunias stand pre-eminent as a hardy, beautiful, all purpose flowering plant. Readily started from seed, they soon come into bloom, becoming a glowing mass of exquisite, showy, and deliciously fragrant flowers, in bloom from early summer until frost. They may be started in fall or early winter indoors to make blooming window plants for late winter and very early spring. *Don't omit these beauties from your list.*

GIANT DOUBLE PETUNIAS Now in Complete Color Range

With the Return of the foreign-grown All Double Victorious Strain, which has not been available since 1943, and with the American-Grown All American All Doubles introduced in the past few years, we are glad to offer again a complete color range in Double Petunias. The seeds are necessarily very expensive due to the fact that they have to be carefully hand pollinated and there is real art and scientific knowledge required to produce seed which will give consistently Double flowers. The seed are smaller and the seedlings weaker than the Single kinds, so require more care in starting.

Soil should be sterilized by pouring water thru it twenty-four hours before planting, and the little seeds planted on the surface of the soil. Then follow directions on pg. 3 and 4 of the "Gardener's Handbook" sent free with your order. The seeds are very tiny, and the 25c packets, contain only a few seeds as noted in the description. We suggest that you obtain the larger packets, but list the 25c packets in keeping with our price policy. **After the All Double Petunias get past the baby plant stage they are quite vigorous and can "take it" even where summers are hot.**

PETUNIA CULTURE

This is covered more fully on page 11 of "The Gardener's Handbook" sent free with your order. We treat all seeds of Petunias with Semesan to help prevent "damping off" which together with covering too deeply causes more failures than anything else. Are Sweet Peas Hard to Grow in Your Climate?—Here's The Answer.

The flowers are of the true Spencer Orchid Flowering type with long stems and wavy petals. Large and deliciously fragrant, they are produced in great quantity on plants of exceptional vigor. The colors are bright and clear. If you grow only one strain of Sweet Peas this is the most practical.

Easy to Grow, Quick to Bloom, Fine to Cut, Fragrant

CHOICE FLOWER SEEDS—PART ONE

ANNUALS and PERENNIALS

Blooming the First Season

ANNUAL FLOWERS are those which grow, bloom, seed and die in one season. There are attractive annuals for every purpose. Some are fine for cutting, others for beds or borders, rock plants and climbers. We have listed in Part 1 the finest of all Annuals, and the perennials which may be treated as annuals in that they will bloom the first season from seed.

HARDY FLOWERS are those which may be sown in early spring as soon as the ground may be worked, or in fall to come up with the first breath of spring for earlier blooms. Hardy perennials and biennials may be planted in July or August and transplanted to permanent location about 1 month before frost where they live over with the protection of a mulch to give bloom in the spring. We think it best to sow perennials and biennials in the spring so that they can become better established before winter.

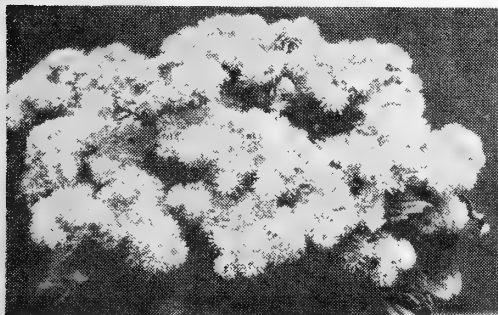

HALF HARDY FLOWERS listed with the symbol hh may be started early indoors for early bloom, or they may be planted outside when danger of frost is over. Half Hardy perennials need winter protection in the Northern states.

PARK'S PERENNIAL FLOWER SEEDS

FOR PERMANENCE AND CHARM

These are valuable subjects of the flower garden, as most of them are not only showy and beautiful when in bloom, but will do service year after year for a long period, enduring cold, excessive rain and drought, regardless of neglect and improper attention. They are easily grown from seeds. Thorough preparation of bed and good care, will award you with everlasting beauty.

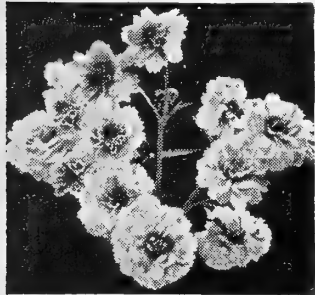

Directions for making outdoor beds and sowing seeds are sent with every order.

Hp. HARDY PERENNIALS are hardy plants which will live and bloom every year for a long period. Plants grow to the flowering stage each year and die down again to the roots which remain alive but dormant until the next season. They are very valuable for borders and cut flowers, and once established require less care than the annuals.

Hb—HARDY BIENNIALS are those which bloom the second year from seed, then die. For a continuous display of this type, seed must be sown every year.

PRIMROSE CULTURAL NOTES

Sow in pots or pans as early in the year as possible, water, cover with glass and place outdoors where the soil will be frozen. When milder weather sets in bring into gentle warmth and seeds will germinate freely. Freeze seeds in ice cubes for similar effect. Allow plenty of time—seeds are often tardy. Primulas need partial shade, rich, porous soil, and a mulch of pine needles or salt hay to keep roots cool—this seems the answer to growing them in warm climates. They like the east side of a hill, shelter from wind, good drainage.

TO CONTROL "DAMPING OFF"

"Damping Off" is a microscopic fungus growth which attacks the baby plants just as they emerge from the ground or while they are still small, and is the reason for many failures which are blamed on the seed, especially where very small seeds are concerned. It may be overcome by treating the seed (We do this for you as an extra "Park Service"), and sterilizing the soil. (Bake in the oven 2 hrs. at 200° 24 hrs. before planting.)

Sphagnum moss is a sterile antibiotic material in which fungi and bacteria cannot live. We have found sowing seed in Sphagnum sifted on sterile soil a positive Damp-off control.

Where sterilizing is impractical, as with an outdoor bed or cold frame, spray the soil, just as the seedlings appear, with Semesan solution (¼ oz. to gallon of water). We offer **SEMESAN** in ¼ lb. pkg. \$1.25. This is enough to spray 480 square feet. ½ oz. (for 40 sq. ft.) 30c.

Park's

GIANT DAHLIAS

Are easily grown from Park's strong tubers.

THE VARIETIES LISTED here are selected with painstaking care from the thousands of varieties in cultivation. Those listed on these pages are the best growers, freest bloomers, and those listed as mammoth will give the largest flowers Dahlias can produce. Growing show dahlias does take careful disbudding, and proper care.

KEEPING CUT DAHLIAS. Strip the foliage except at the top, recut the stem and immerse in water as hot as the hand will bear. When water cools transfer the Dahlias to cold water and place in the cellar overnight. Treated thus they will keep for several days and increase in size.

DAHLIA CULTURE. This subject including how to prevent disease and get rid of insect pests is covered fully in "The Gardener's Handbook." For bedding effects plant on or a week before frostproof date. For exhibition blooms plant late (May and June). Late planting brings the plants into bloom during late summer and fall when the cool temperatures promote better blooms.

EXHIBITION DAHLIAS. Exhibition Dahlias and satisfactory tubers cannot be produced in the same hill. If you want 12 inch flowers, go after them with fertilizer, water and disbudding.

INDEX, GERMINATION and CULTURE GUIDE

When sowing seeds it is always best to divide the packets and sow at different times. Note the time and give good care until the plants have had time to appear. The following table gives the time normally required for germination of each variety of seeds. This time may vary as much as 25% either way. Do not condemn seeds until you have given them at least two or three trials. Those marked z or having the dagger (†) beside them may lie dormant for a year or more. The other tables are self explanatory, and while they are somewhat complicated, do give a great deal of information about each of the hundreds of species listed.

GLOXINIA CULTURE. For a succession of bloom start bulbs every two weeks from January thru April. Pot with crown protruding, using equal parts of rich fibrous loam, sand, and leaf mold. A warm temperature (70 degrees) is required or bulbs will rot. Insure good drainage by placing gravel in bottom of the pot. Water sparingly until growth starts, then plenty of water should be given and care taken not to wet the leaves. An eastern exposure, well sheltered from strong wind and sun suits them. After blooming, withhold water to ripen the tubers, then store in sand for winter at 45 degrees.
